

CONICAL DIAMOND GRINDING BIT 2-38MM

VIBDRC238M14

Designed for grinding and chamfering, this conical bit allows detailed work, refining corners and edges with greater precision and control. With an M14 thread compatible with common angle grinders, this accessory features a conical profile covering diameters from 2 to 35 mm, providing flexibility. Vacuum brazed diamond technology speeds up material removal, while the robust construction extends service life and reduces wear, even on demanding materials such as porcelain, granite, marble, cement, or natural stone. In addition, this bit stands out for its versatility, as it can work dry in many applications, maintaining controlled and high-quality grinding even at high speeds. When used with water, cooling and durability are further increased.

Key features

- > Suitable for very hard materials such as porcelain stoneware, granite, marble, cement, or natural stone;
- > Fast material removal thanks to exposed diamonds (vacuum brazed);
- > Increased strength and robustness, reducing grain loss;
- > Ability to work dry, thanks to vacuum-brazed diamond technology;
- > Clean and precise grinding, ensuring professional finishes;
- > Extended service life guaranteed by reduced wear.

Specifications

Diameter	2 - 38 mm
Fixing thread	M14
Grit	Diamond
