

SIGNALLING MESH

VIRPLA

This HDPE safety barrier mesh is designed for the temporary demarcation of construction sites, hazardous areas, roadworks, events and other locations where access control or visual separation is required. Manufactured from high-density polyethylene (HDPE), it provides good durability for outdoor applications while its bright orange colour ensures excellent visibility, helping to clearly identify safety perimeters. With a 100 cm height, 50 m length and 80 g/m weight, it enables fast installation of temporary safety barriers. Its lightweight construction makes transport, installation and removal easy, and it can be used with posts or other temporary fencing systems.

Key features

- > Manufactured from durable HDPE
- > High-visibility orange colour
- > 100 cm height and 50 m length
- > 80 g/m lightweight construction
- > Quick and easy installation
- > Ideal for construction sites and hazardous areas

Specifications
