

CHAINSAW BAG

VISM55

Compatible with chainsaws with guide bars up to 22", this bag is a lightweight solution, designed to optimise the work of professional users. Made from waterproof polyester, it comes with a padded lining that effectively protects the machine against impact and wear. Besides, the reinforced PVC base adds a layer of protection that ensures stability and resistance, especially on uneven surfaces. For easy transport, this bag features an ergonomic thermoplastic rubber (TPR) handle that ensures a comfortable and secure grip, and an adjustable shoulder strap with anti-slip properties that increases comfort and reduces fatigue during prolonged use. In addition, access to the interior is simple and quick, thanks to the two fasteners that run the length of the bag, allowing for a wide opening. Inside, the front compartments add an element of organisation. To enhance its versatility, the bag features buckles that allow you to adjust the accessory conveniently and has an external pocket for an identification card.

Key features
